

CCI

ActiView

■ CCI System
■ ActiView

OVERVIEW

The ActiView™ incorporates a high-resolution preview display with the full editing power of the CCI 400 series terminals. With this station both text and graphics can be displayed on request. The operator will see the actual position of the type, hyphenation and justification, point sizes, leading, and imbedded graphics (or white space). With the ActiView's™ split screen, an operator can edit source text as if it were a CCI editing terminal and at the same time see a graphic representation of the job.

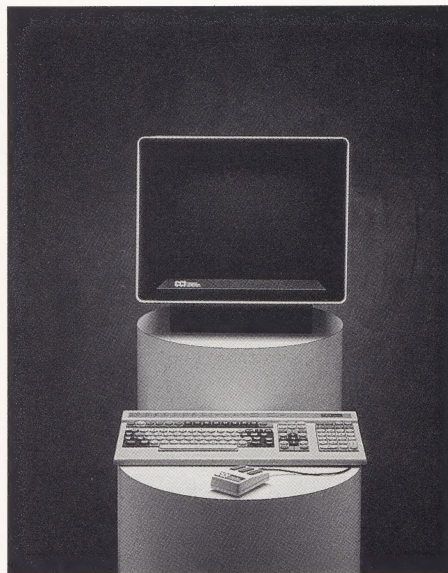

APPLICATION OVERVIEW

The ActiView™ allows the user to preview and simultaneously edit and correct a document at the same work station. Being able to revise and inspect typeset copy without going to photographic paper is both a time and money saver.

Commercial: One pass typesetting has long been the goal of the commercial typesetter. Now with the ActiView™ it is a reality and all with the same keyboard.

Inplant: In the inplant environment the ActiView™ adds to the throughput of forms and complicated tabular work as well as allowing operators to manipulate their work electronically.

Special: The ActiView™ gives quick and accurate feedback and positive reinforcement with its display, icons and mouse that not only make work easier but aid in the training of new operators.

HIGHLIGHTS

- Motorola 68000 CPU
- 17-Inch Screen
- Interactive Editing
- Icon Menu Selection
- Representative Font Display
- On Screen Pica Pole
- 400E Compatibility
- 1.5 Megabytes of Memory
- Mouse
- Modular Construction
- Hardware Zoom, Pan and Scroll
- Graphic Copy Fit
- Expandable to 16MB of Memory

FEATURES and BENEFITS

MC68000 based processor

A dedicated high performance computer controls screen and improves system performance.

Uses a standard CCI keyboard

It does not require special training for an operator to use the terminals.

Split screen capability

So that page preview and editing can occur at the same station providing the most effective way to "softset" a document while allowing flexibility for needed changes.

High resolution graphic monitor

The monitor provides excellent clarity of screen characters and graphics.

Mouse/Icon concept

Makes for user friendly interface and gives operator helpful information regarding systems operations.

Cross-hair cursor

Allows the operator to pinpoint a position in the typeset copy that requires changes, thus speeds editing.

Incremental sizing

Provides the ability to reduce or expand size of text to aid in viewing different text sizes.

SPECIAL CONSIDERATIONS: Systems that support it: All. Memory consideration: 1.5 megabytes. Environmental: Office. Modem Type: None. MUX Channels: 2. Communication Protocol: CCI. Other: Will be equipped with the CCI 400E keyboard and mouse.
